

# AquaDam<sup>®</sup> vs. Sandbag Berms

Sandbags have been the go-to flood protection method for years, but there is a quicker and more effective way to protect your property. AquaDam<sup>®</sup> can eliminate the cost, time, and hassle of filling, placing, and removing sandbag barriers.

## Manpower required for installation:

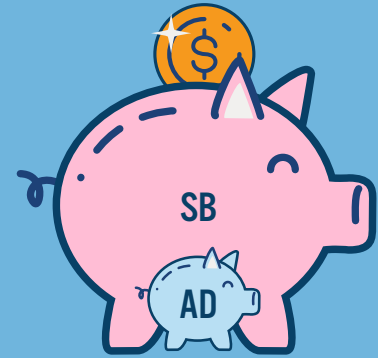

AquaDam<sup>®</sup>  
2 Workers @ 20 minutes each  
= 40 Minutes Total

Sandbag Berms  
10 Workers @ 4 hours each  
= 40 Hours Total

**AquaDam<sup>®</sup> Installed 10x Faster than Sandbags**

## Cost Savings

AquaDams offer a  
25% Savings (or more in some  
instances) over sandbags.

## Reduce your environmental impact

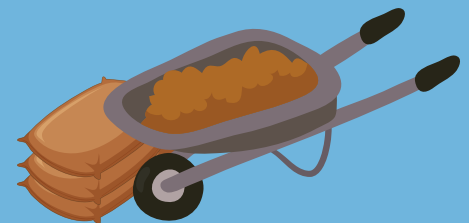

AquaDams can be  
cleaned and reused  
with proper handling.

VS.

Sandbags must be  
disposed of after a  
single use.

By eliminating the use of  
dirt/earth fill material (commonly  
used by sandbags), the potential  
for polluted discharge into local  
waterways is dramatically  
reduced, if not eliminated.
